## **FL-819 Type Fully Automatic Insert Tube And Forming Machine For Loose Capacitor (LED)**

### **Spec**

Input Power: 220V 50HZ

Size: L1555\*W1050\*H1650MM

Weight: 800KG

Speed: 1500-1800PCS/H

### **Introduction**

- The equipment is specially designed for casing the component leads and body for loose capacitor, Led and other radial components, and special equipment for cutting and forming.

### **Features**

- The components are automatically fed by vibrating plate, through the line guide feeding to turntable mechanism for casing tube and forming.
- For electrolytic capacitor, LED and other polar components, other the polarity can be automatically identified, the order can be unified according to the fixed direction, meet the requirements of polarity discrimination when forming.

- 
- The high precision casing entry mechanism enables the heat-shrinkable casing or teflon tube to be accurately fitted into the capacitor/LED pins. The length of the casing can be adjusted.
  - After casing tube the capacitor and led and other components, division of station forming and cutting. The dimension of cutting and forming can be adjusted, also can change the forming shape by replacing the forming mold.
  - The processed components can automatically fall into the material box and count automatically.
  - The machine is equipped with Mitsubishi PLC and touch screen for precise control. Adopt CAM divider, running stably and accurately.
  - The whole operation of the machine is fully automatic, and no human operation is required except for the adding the capacitor /led to the vibration disk and installing the coil of tube.
  - All actions are divided in order, and the structure of each station is completely independent, which is convenient for debugging and replacement.
  - The machine is easy to operate and maintain.
